Digitization and Digital Archiving Elizabeth R. Leggett, 2014-07-24 More and more, library patrons are embracing the ease with which information can be accessed digitally. In an instant, a few keywords can bring patrons exactly what they desire, such as a book or a photograph, rather than going through the much more tedious activity of browsing through shelves, searching for a call number, or, even more daunting, the process of trying to work a microfilm reel. Thus, many librarians in libraries of every size and type are currently working toward making more information available electronically. This process can be daunting, however. *Digitization and Digital Archiving: A Practical Guide for Librarians* seeks to answer the following common questions: What should be stored? Where and how should it be stored? How exactly is information stored in a computer? Does it really make a difference if one uses a jpg or a tiff file? This book is a comprehensive guide to the process of digital storage and archiving. Assuming only basic computer knowledge, this guide walks the reader through everything he or she needs to know to start or maintain a digital archiving project. Any librarian interested in how digital information is stored can benefit from this guide.

Gender in Science Fiction Films, 1964-1979 Bonnie Noonan, 2015-06-15 The 1950s era of science fiction film effectively ended when space flight became a reality with the first manned orbit of Earth in 1962. As the genre's wildly speculative depictions of science and technology gave way to more reality-based representations, relations between male and female

characters reflected the changing political and social climates of the era. Drawing on critical analyses, film reviews and cultural commentaries, this book examines the development of science fiction film and its representations of gender, from the groundbreaking films of 1968--including 2001: A Space Odyssey, Barbarella and Planet of the Apes--through its often overlooked Middle Period, which includes such films as Colossus: The Forbin Project (1970), The Stepford Wives (1975) and A Boy and His Dog (1975). The author examines intersections of gender and race in The Omega Man (1971) and Frogs (1972), gender and dystopia in Soylent Green (1973) and Logan's Run (1976), and gender and computers in Demon Seed (1977). The big-budget films of the late 1970s--Close Encounters of the Third Kind, Alien and Star Wars--are also discussed.

The Prime of Miss Jean Brodie Muriel Spark, 2015-08-06 The Prime of Miss Jean Brodie is Muriel Spark's most significant and celebrated novel, and remains as dazzling as when it was first published in 1961. Miss Jean Brodie is a teacher unlike any other, proud and cultured, enigmatic and freethinking; a romantic, with progressive, sometimes shocking ideas and aspirations for the girls in her charge. At the Marcia Blaine Academy she takes a select group of girls under her wing. Spellbound by Miss Brodie's unconventional teaching, these devoted pupils form the Brodie set. But as the girls enter their teenage years and they become increasingly drawn in by Miss Brodie's personal life, her ambitions for them take a startling and dark turn with devastating consequences.

Ethics and Images of Pain Asbjørn Grønstad, Henrik Gustafsson, 2012-04-27 Few phenomena are as formative of our experience of the visual world as displays of suffering. But what does it mean to have an ethical experience of disturbing or traumatizing images? What kind of ethical proposition does an image of pain mobilize? How may the spectator learn from and make use of the painful image as a source of ethical reflection? Engaging with a wide range of visual media--from painting, theatre, and sculpture, to photography, film, and video--this interdisciplinary collection of essays by leading and emerging scholars of visual culture offers a reappraisal of the increasingly complex relationship between images of pain and the ethics of viewing. Ethics and Images of Pain reconsiders the persistent and ever pertinent nexus of aesthetics and ethics, the role of painful images as generators of unpredictable forms of affect, the moral transformation of spectatorship, the ambivalence of the witness and the representation of affliction as a fundamental form of our shared scopic experience. The instructive and illuminating essays in the collection introduce a phenomenological context in which to make sense of our current ecology of excruciating images, one that accentuates notions of responsibility, empathy, and imagination. Contributors trace the images of pain across a miscellany of case studies, and amongst the topics addressed are: the work of artists as disparate as Doris Salcedo, Anselm Kiefer and Bendik Riis; photographs from Abu Ghraib and Rwanda; Hollywood war films and animated documentaries; performances of self-immolations and incidents of police brutality captured on mobile phones.

Theories of Development William Crain, 2015-10-02 The result of extensive scholarship and consultation with leading

scholars, this text introduces students to twenty-four theorists and compares and contrasts their theories on how we develop as individuals. Emphasizing the theories that build upon the developmental tradition established by Rousseau, this text also covers theories in the environmental/learning tradition.

Memory and Intermediality in Artists' Moving Image Sarah Durcan, 2020-10-19 This book addresses the preoccupation with memory in contemporary artists' moving image installations. It situates artists' moving image in relation to the transformations of digitalization as hybrid intermedial combinations of analogue film, video and digital video emerge from mid 1990s onwards. While film has always been closely associated with the process of memory, this book investigates new models of memory in artists' remediation of film with video and other intermedial aesthetics. Beginning with a chapter on the theorization of memory and the moving image and the diverse genealogies of artists' film and video, the following chapters identify five different mnemonic modes in artists' moving image: critical nostalgia, database narrative, the 'echo-chamber', documentary fiction and mediatized memories. Stan Douglas, Steve McQueen, Runa Islam, Mark Leckey and Elizabeth Price are of a generation that has lived through the transition from analogue to digital. Their emphasis on the nuances of intermediality indicates the extent to which we remember through media.

The Ecology of Human Development Urie BRONFENBRENNER, 2009-06-30 Here is a book that challenges the very basis of the way psychologists have studied child development. According to Urie Bronfenbrenner, one of the world's foremost developmental psychologists, laboratory studies of the child's behavior sacrifice too much in order to gain experimental control and analytic rigor. Laboratory observations, he argues, too often lead to the science of the strange

behavior of children in strange situations with strange adults for the briefest possible periods of time. To understand the way children actually develop, Bronfenbrenner believes that it will be necessary to observe their behavior in natural settings, while they are interacting with familiar adults over prolonged periods of time. This book offers an important blueprint for constructing such a new and ecologically valid psychology of development. The blueprint includes a complete conceptual framework for analysing the layers of the environment that have a formative influence on the child. This framework is applied to a variety of settings in which children commonly develop, ranging from the pediatric ward to daycare, school, and various family configurations. The result is a rich set of hypotheses about the developmental consequences of various types of environments. Where current research bears on these hypotheses, Bronfenbrenner marshals the data to show how an ecological theory can be tested. Where no relevant data exist, he suggests new and interesting ecological experiments that might be undertaken to resolve current unknowns. Bronfenbrenner's groundbreaking program for reform in developmental psychology is certain to be controversial. His argument flies in the face of standard psychological procedures and challenges psychology to become more relevant to the ways in which children actually develop. It is a challenge psychology can ill-afford to ignore.

The Chemistry of the Actinide and Transactinide Elements (3rd ed., Volumes 1-5) L.R. Morss, Norman M. Edelstein, Jean Fuger, 2007-12-31 The Chemistry of the Actinide and Transactinide Elements is a contemporary and definitive compilation of chemical properties of all of the actinide elements, especially of the technologically important elements uranium and plutonium, as well as the transactinide elements. In addition to the comprehensive treatment of the chemical properties of each element, ion, and compound from atomic number 89 (actinium) through to 109 (meitnerium), this multi-volume work has specialized and definitive chapters on electronic theory, optical and laser fluorescence spectroscopy, X-ray absorption spectroscopy, organoactinide chemistry, thermodynamics, magnetic properties, the metals, coordination chemistry, separations, and trace analysis. Several chapters deal with environmental science, safe handling, and biological interactions of the actinide elements. The Editors invited teams of authors, who are active practitioners and recognized experts in their specialty, to write each chapter and have endeavoured to provide a balanced and insightful treatment of these fascinating elements at the frontier of the periodic table. Because the field has expanded with new spectroscopic techniques and environmental focus, the work encompasses five volumes, each of which groups chapters on related topics. All chapters represent the current state of research in the chemistry of these elements and related fields.
